

Curriculum you can teach. A copyright that protects the students in the room.

Lenexa's own description of the School Resource Officer role names three functions. The third is **guest teacher**. This brief is about that third function — and about who owns, governs and answers for the material an officer stands up and teaches.

Why the School Resource Unit, and not procurement

Every Lenexa SRO is certified by the National Association of School Resource Officers.¹ During the school year SROs are assigned full-time into their buildings; over the summer the same unit runs the free Youth Police Academy for ages 13–17.² That makes this unit the one part of the department already, formally, in the education business. A stewardship framework for teaching material belongs with the people who teach.

SROs “fulfill three basic functions in their school assignments”: law enforcement officer, informal counselor, and guest teacher — for law-related education, violence prevention and de-escalation, internet safety, bullying, alcohol and drug prevention, and crime prevention.³

Internet safety and bullying are already on that list. They are also the two subjects where the teaching material itself is most tempted to collect information about the child being taught. That is the point where a copyright and stewardship framework stops being paperwork and becomes a safeguard.

SCHOOL RESOURCE UNIT	CERTIFICATION	DISTRICTS SERVED	YOUTH POLICE ACADEMY
6 Full-time SROs in the Special Operations Division. The department's SRO page says four and its structure page says six; ^{1,3} six matches the published contact list.	100% “All of our SROs are certified by the National Association of School Resource Officers.” ¹	3 Shawnee Mission USD 512, De Soto USD 232, Olathe USD 233. ⁴ Cross-district posting confirmed at Mill Creek Middle School. ⁵	13–17 One week, twice each summer, free, lunch included — run by the SRO unit when school is out. ²

What ARK is

ARK is the authorship and stewardship block carried at the foot of every page of every EVE Glyph Design surface — 661 pages across thirteen parishes and nine languages today. It is one paragraph, short enough that a city attorney can read it in under a minute. It does two things: it reserves the design work, and it names who holds the right to assign that work to a large public institution.

RESERVED BY THE AUTHOR	WHAT AN INSTITUTION RECEIVES
- The EVE “digital stem cell” glyph and the glyph-based design principles behind it. All rights reserved. - Founder credit to Donat Omer Thériault, EVE Glyph Design — stated on the surface as irrevocable. - The right to be identified as the origin of the method, not merely a vendor of files.	- A governance receipt — a written record of what the institution was granted and on what terms. Exit at any time, with a full export of its own content. No hostage data, no migration penalty. - Material it may teach and publish under its own name, with the authorship line intact at the foot of the page.

Stewardship of rights of use and assignment *for large public and institutional usage* rests with the **Pacific Utilities Design Council**. For a municipal department that is the operative sentence: it names a standing body as the counterparty for any assignment at institutional scale, rather than leaving a city to contract with one individual and hope for continuity.

THE DOCTRINE, BEFORE THE PITCH

No profiling of individuals

No person is counted, categorised or targeted by this platform. Ever. On a school surface that means no student analytics, no engagement scoring, no behavioural flags, no cohort segmentation — nothing that produces a record about a named child.

Institutional sovereignty

The institution binds the platform, not the reverse. It receives a governance receipt and may leave at any time with everything it put in.

Safety first, betterment second

Safety of content and identity ranks above growth, engagement and revenue. Where they conflict, safety wins and the feature does not ship.

No tracking on the surfaces

The live surfaces carry no cookies, no analytics and no third-party scripts other than a web font. Verifiable by viewing source, not a promise in a privacy policy.

How it sits against the law you already work inside

Orientation, not legal advice. The city's counsel should check every line; sources are numbered below so they can.

Authority	What it governs	Why the no-profiling rule matters
FERPA 20 U.S.C. §1232g	Records held by a school. Law-enforcement-unit records are carved out, but an SRO reaches actual education records without consent only if formally designated a school official. ⁶	Material that generates no student record cannot drag an officer across that line by accident.
PPRA 20 U.S.C. §1232h	Parental rights over instructional material, and consent for surveys touching sensitive subjects. ⁶	Curriculum with a public, readable licence and no embedded survey instrument is straightforward to show a parent.
COPPA	Children under 13. A school may consent for a vendor only inside a narrow educational context — never for commercial or profiling use. ⁷	Collecting nothing removes the question rather than answering it.
Kansas juvenile records K.S.A. 38-2309, 38-2310	Access to juvenile records, with restrictions below age 14 and carve-outs letting educators see what is necessary for campus safety. ⁸	A programme that creates no juvenile record creates none to fight over.
KORA K.S.A. 45-215 et seq.	Kansas Open Records Act. Police records are presumptively open, with enumerated exemptions. ⁹	Curriculum the department holds is not automatically shielded from a records request. Material already public by design has nothing to disclose under pressure.
Copyright 17 U.S.C. §105	Federal works are public domain; state and municipal works generally are not, and remain copyrightable. ¹⁰	A city can hold and use licensed material without the authorship being erased into the public domain.

Why a framework adopted in Lenexa travels

American policing is not ten thousand unconnected departments; it is ten thousand departments wired to the same small set of standards bodies. **NASRO** certifies every Lenexa SRO — and NASRO's own curriculum is fully copyrighted, all rights reserved, so a designer retaining copyright while licensing to a department is the norm in this field, not an unusual ask. **IACP** membership runs through the chief's office.¹¹ **NIBRS** and the **CJIS Security Policy** already impose a common data discipline. **CALEA** is the national accreditation route. A governance framework proven in one city is legible in the next one.

WHAT IS NOT YET SETTLED — STATED UP FRONT

1. No precedent was found for a named private designer licensing curriculum to a United States municipal police department while retaining copyright. This is new ground for both sides and should be treated as such.
2. Lenexa PD publishes no youth- or student-specific data policy — nothing on juvenile records handling, school data-sharing agreements, or redaction practice for minors. A documented absence, not an allegation, and the gap this framework is built to fill.
3. The SRO headcount is inconsistent between two official city pages, four against six. Worth correcting regardless of anything in this brief.
4. No department-level CALEA or KLEAP accreditation is published. NASRO certification of the SROs is the one standards affiliation the department states plainly.
5. The city's own intellectual-property and procurement policy has not been reviewed here. Whatever is proposed has to survive it.

The ask

Not a purchase and not a pilot agreement. One conversation: a reading of the ARK block by whoever in the city would have to live with it, and an honest answer on whether a designer-retained, institution-licensed model for school-outreach material is something Lenexa could use — or whether it is not a fit. A clear no is a useful outcome.

AUTHORSHIP AND STEWARDSHIP

© 2026 Dany Theriault. EVE “digital stem cell” glyph and glyph-based design principles — all rights reserved. Stewardship of rights of use and assignment for large public and institutional usage rests with the Pacific Utilities Design Council. Published as a time-stamped record of authorship and intent.

Design founder credit to Donat Omer Thériault is irrevocable and travels with the work. This document is published as a time-stamped record: it is committed to the public repository above and its SHA-256 digest is registered in [lenexa/RECORD.md](#). The proof lives in the ledger, not inside the file — there is no hidden metadata, no embedded payload and no tracker in this PDF. Hash it and check.
