

Lenexa Police Department

School Resource Unit — Special Operations Division

Lenexa, Kansas · 25 July 2026

This page is the whole briefing. The three pages behind it are the evidence. Nothing in this document asks the department for money, for data, or for a signature today.

The proposal, in four sentences

A designer in your city has built a body of educational and civic material and is offering it to this department for use in school outreach. He is not selling it and he is not giving it away; he is proposing a **stewardship arrangement** in which the department may use, teach and publish the material under its own name while authorship of the underlying design remains with him. The reason to formalise that rather than shake hands is that internet-safety and bullying material sits directly on top of student privacy law, and the question of who owns the material is the same question as who is accountable for what it collects. This proposal is that the answer be written down before anything is taught, not after.

WHAT IS BEING ASKED FOR	WHAT IS NOT BEING ASKED FOR	WHAT IT COSTS TO LOOK
That someone in the chain of command read the brief and say whether this is worth a conversation. That is the entire ask at this stage.	No purchase. No budget line. No procurement. No contract. No student data. No access to any department system. No exclusivity.	Nothing. Every artifact is public, downloadable without an account, and verifiable by one command. Reading it creates no obligation.

Why this unit

The department publishes that its School Resource Officers fulfil three functions: law enforcement officer, informal counselor, and **guest teacher** — including instruction in internet safety and bullying. That third function is the one this proposal touches. An officer standing in front of a classroom with teaching material is, at that moment, handling something governed by education privacy law as much as by police policy. A working instance already exists in your own city — Holy Trinity, 13615 West 92nd Street — built on the same canon and running today.

UNIT	School Resource Unit — Special Operations Division
UNIT SIZE	Four to six officers, depending which of the department's own two published pages you read — a discrepancy noted, not exploited.
DISTRICTS SERVED	Shawnee Mission USD 512 · De Soto USD 232 · Olathe USD 233
PUBLIC SURFACE	eveglyphdesign.github.io/paix-parish-platform/lenexa/

What already exists

Not a proposal deck. These are live, public surfaces that can be opened on any browser, on any device, without an account.

ARK Stewardship Brief	The argument, 3 pages	ARK-Stewardship-Brief-Lenexa-PD-2026-07-25.pdf
ARK Extract, sealed	The instrument itself, 2 pages	ARK-EXTRACT-LENEXA-PD-2026-0725.pdf
Verification manifest	SHA-256 of every artifact	ARK-EXTRACT-LENEXA-PD-2026-0725-manifest.txt
Record of transmission	Append-only ledger	RECORD.md
The Lantern Room	Playable classroom wireframe	game/

Behind those five sits the wider body of work: **26 public repositories** under [github.com/EVEglyphDesign](#), including a 13-parish platform in four countries running in nine languages, each page carrying the same authorship line. Nineteen of them have a published site. Every one can be cloned in full, commit history included, by anyone, without permission.

The classroom piece, honestly described

The Lantern Room — a playable wireframe, not a finished product

Five situations a middle-schooler recognises: a message from a stranger, a group chat turning on someone, a request for a photo, a password that got out, a friend shut out. Three ways through each. No score and no buzzer — every choice returns an honest consequence and the principle behind it, and the class argues about it afterwards. A **teacher view** reveals discussion prompts, so an officer can run it from the front of a room rather than hand out devices.

It records nothing. No account, no cookie, no analytics, no server. That is not a policy statement — it is checkable: open the browser network tab and watch nothing happen. What is not built yet is stated on the page itself: artwork, audio, the full scenario set, a formal accessibility audit, and alignment to NASRO curriculum.

The privacy position, stated as a rule rather than a promise

NO PROFILING OF INDIVIDUALS. EVER.

No student analytics. No engagement scoring. No behavioural flags. No cohort segmentation. Nothing that produces a record about a named child. Safety ranks first, human betterment second; everything else — engagement, growth, revenue — starts third. A feature that fails the first test does not ship, and one that clears it but fails the second still does not ship.

This matters to a school resource unit for a specific reason. Most educational technology is funded by measuring the children using it. The moment a department puts its name on such a tool, the department owns the consequences of that measurement — under education privacy law, under state juvenile-records law, and in front of a school board. Material that collects nothing removes that exposure rather than managing it.

The law this sits on

Cited so the department’s own counsel can check the ground rather than take anyone’s word.

INSTRUMENT	CITATION	WHY IT BEARS ON THIS
FERPA	20 U.S.C. § 1232g	Education records. Contains a law-enforcement-unit carve-out, and a route by which an officer can be designated a school official. Which one applies changes who may see what.
PPRA	20 U.S.C. § 1232h	Surveys and instructional material touching protected areas. Reaches directly into classroom content, which is what this proposal is about.
COPPA	15 U.S.C. §§ 6501–6506	Online collection from children under 13. Applies to the tool, not only to the school.
Kansas	K.S.A. 38-2309 / 38-2310	Law-enforcement records of juveniles — who may see them, and when.
Kansas	Kansas Open Records Act	What the department must disclose on request, and what it may withhold.

On a department using copyrighted teaching material

This arrangement is less unusual than it sounds. **NASRO’s own curriculum — the training this unit’s officers are certified under — is All Rights Reserved.** A department already teaches from material it does not own, under terms set by the author. Nothing here departs from that pattern; it only writes the terms down in public rather than leaving them in a training agreement nobody reads.

The reverse point is worth stating too, because it is often assumed away: works produced by state and municipal bodies **are** copyrightable. The federal-government exclusion at 17 U.S.C. § 105 does not extend to cities, and *Georgia v. Public.Resource.Org* narrowed the edicts-of-government doctrine to law itself, not to everything a government publishes. A department can therefore hold, and can also be granted, rights in teaching material.

The split being proposed

RESERVED BY THE DESIGNER	HELD IN STEWARDSHIP	GRANTED TO THE DEPARTMENT
The EVE “digital stem cell” glyph and the design principles behind it. Founder credit to Donat Omer Thériault. Identification as origin of the method — not vendor of files. Not assignable, not extinguished by use.	Rights of use and assignment at large public and institutional scale sit with the Pacific Utilities Design Council, so the counterparty is an institution — not one individual whose continuity a city would have to gamble on.	A governance receipt recording what was granted and on what terms. Exit at any time with a full export of the department’s own content. The right to teach and publish under the department’s own name, authorship line intact.

What could go wrong, said out loud

A briefing that lists only upside should not be trusted, so here is the other column.

The material is not finished.	The classroom piece is a wireframe. Treating it as a shippable product would be a mistake, and the page says so on its own face.
This is one designer.	That is precisely why rights of use and assignment sit with a council rather than with him, and why every artifact is published in a public repository that survives him.
A grant of rights is a legal act.	It should go past the city attorney before anyone signs anything. Nothing here is drafted to be signed today; the signature block on the extract leaves the department’s line blank on purpose.
Curriculum alignment is unproven.	No claim is made that this maps to NASRO curriculum or to any district standard. It has not been assessed against either.

Verifying this printed copy

A printed page proves nothing on its own. The electronic original is fingerprinted and published, so any copy can be checked against it:

```
sha256sum <file>
certutil -hashfile <file> SHA256 (Windows)
```

Fingerprints for every artifact are published in the manifest at [the address on page two](#), committed to a public repository before this briefing was sent. The commit is the timestamp — not the sending. A copy whose fingerprint differs is not the original.

Decision

☐ **Worth a conversation.** Route to the division commander and schedule thirty minutes.

☐ **Refer to the city attorney** before the department engages further.

☐ **Not at this time.** No reply required — the material stays public and the offer stays open.
